

Infant Alfred Joy

Senior QA Engineer

alfredr.5112@gmail.com | +91 9003080481 | Chennai, India | linkedin.com/in/infant-alfred-joy | github.com/alfred5112-code | alfred5112-code.github.io/portfolio

PROFESSIONAL SUMMARY

Senior QA Engineer with 6+ years of experience in Functional, API, Mobile, IoT, and Automation Testing across Media, Smart Water Management, Logistics, and Cybersecurity domains. Skilled in requirement gathering, solution design, risk-based testing, and building automation frameworks using Robot Framework, Python, Appium, and Selenium. Proven track record collaborating with cross-functional teams -- architects, developers, QA, and business stakeholders -- to deliver holistic, client-focused solutions using Agile methodologies. Regularly leverage Generative AI (GenAI) tools including GitHub Copilot, ChatGPT, and LLMs to generate test scenarios, accelerate automation, and build agentic workflows with strong human-in-the-loop validation. Experienced in post-deployment support, client communication, and data-driven decision-making.

ROLES AND RESPONSIBILITIES

- Senior QA Engineer, Infosys / Charter Communications**

03/2025 – 02/2026

 - Led offshore Analytics QA across Android, iOS, Apple TV, Roku TV, Xumo and Web, collaborating with cross-functional teams -- architects, developers, QA, and business stakeholders -- to deliver holistic quality solutions.
 - Designed and vibe-coded a GenAI-powered agent (Python + LLM / n8n) to pull requirements directly from JIRA and auto-generate draft test cases, reducing manual test case authoring time by 20% and surfacing coverage gaps earlier in the sprint.
 - Built a GitHub Copilot-integrated agent using n8n to accelerate automation script generation for the Spectrum regression suite; refined the agent through iterative prompt tuning, correcting hallucinated/duplicate test steps to improve output accuracy and reduce manual QA rework.
 - AI-assisted agents shortened test case creation and scripting cycles, freeing time for exploratory testing and complex regression scenarios -- supporting a 20% regression cycle reduction on the project.
 - Engaged in requirement gathering, risk-based test planning, and technical decision-making for critical business flows aligned to client business goals; reviewed AI-generated test cases using human-in-the-loop validation before implementation.
 - Performed API validation, end-to-end testing, Charles Proxy analysis, and Go-Live support; built and maintained regression automation scripts using Python, SauceLabs, and Appium Client for the Spectrum News & Sports applications.
 - Maintained a zero production bug escape rate across releases; coordinated Go-Live testing and post-deployment support with project leads and client stakeholders.
 - Performed end-to-end testing across Android, iOS, Apple TV, Roku TV, Xumo, and Web platforms in an Agile delivery model, validating complete user journeys from content discovery through playback.
- QA Engineer, Datawens Technologies**

07/2023 – 03/2025

 - Sole QA for IoT devices and the WaterCompass platform, partnering with developers and business stakeholders on requirement gathering and solution design.
 - Applied risk-based testing and built Robot Framework automation suites within an Agile delivery process, using GitHub Actions for automated execution pipelines.
 - Used ChatGPT (GenAI) to generate initial test cases from requirements and refined them manually with human-in-the-loop review, maintaining a zero high-severity escape rate across every release.
 - Designed and executed end-to-end test plans covering API stories, database validation, and functionality for the WaterCompass application, spanning device telemetry, API, database, and front-end layers.
 - Conducted sprint-end demos and client communication touchpoints, showcasing test coverage, defect status, and release readiness.
 - Reduced regression cycle time by 10% through automation of repetitive test suites using Robot Framework and Python; developed API performance test scripts using JMeter.
 - Executed IoT and device-level testing using physical controllers and water meters to validate telemetry data accuracy; performed AWS/DBeaver data validation prior to release, and managed test cases in TestRail derived from JIRA and Confluence requirements.
- QA Engineer, Newage Software and Solutions**

06/2021 – 07/2023

 - Collaborated with Product Owners and UX designers to derive high-level test scenarios for the Newage NXT ERP platform, covering positive and negative flows.
 - Conducted end-to-end testing of the freight forwarding ERP platform, validating import/export workflows across functional, API, and mobile layers using Swagger, Postman, MySQL, and PostgreSQL.
 - Tested Android mobile applications using BrowserStack and physical devices.
 - Published and managed test cases in JIRA AIO Test Management; led comprehensive test execution cycles within Agile sprints.
 - Received the WOW Tester Award (2021) for outstanding testing contributions and ownership of deliverables.
- QA Associate, Sutherland Global Services**

12/2019 – 06/2021

 - Performed functional web application testing, defect reporting, and test case development for Norton LifeLock, ensuring high-quality, timely delivery aligned to requirements.

TECHNICAL SKILLS

AI-Assisted QA / GenAI	ChatGPT, GitHub Copilot, Amazon Q, Prompt Engineering, LLM Fundamentals, RAG Concepts, Agentic Workflows (n8n)
Programming	Python
CI/CD	GitHub Actions, GitHub
Databases	MySQL, PostgreSQL, AWS, DBeaver
Automation	Robot Framework, Selenium, Appium, JMeter
API Testing	REST APIs, Postman, Swagger
Testing	Requirement Gathering, Solution Design, Risk-Based Testing, Test Design, Functional, Regression, API, End-to-End, UAT, Smoke, Mobile & IoT Testing
Delivery & Collaboration	Agile Methodologies, Cross-Functional Collaboration, Client Communication, Post-Deployment Support, Data-Driven Decision-Making

PROFESSIONAL DEVELOPMENT

- Amazon Q Workshop – AI-assisted Software Development & Testing | Business Analysis Fundamentals, Udemy
- Complete Python Bootcamp, Udemy | Software Testing, Q-Spider
